

# Junk Email Assistant

## User-Controlled Filters Block up to 95% of Spam From Reaching Your Computer

Spam costs you money—Wasted time downloading and reading the spam and wasted money paying for bandwidth to download the spam. And, it is annoying.

Spam does not have to cost you money or annoy you any more. The Junk Email Assistant prevents email from ever reaching your computers. You do not have to install new software to be automatically protected—all you have to do is contact your email service provider.

The Junk Email Assistant is the best anti-spam solution available.

### You are In control

It is the only spam blocker that puts you in control. You define exactly what level of protection you want, and what is spam and what isn't. You don't have to rely on some anonymous "spam cop" to censor your email.

You decide what is spam and what isn't. You will have your own, password-protected Message Center with an easy to use interface that allows you to adjust filter settings from lenient to aggressive, select the type of email you want blocked (Get Rich Quick, Sexually Explicit, Special Offers, and Racially Insensitive), and to "approve" or "block" specific senders or entire domains.

The screenshot shows the 'Message Center' configuration interface. At the top, there are links for 'Configure: Wireless', 'Junk Email', 'Virus', and 'Fax'. Below this is the 'Category Filters' section, which includes instructions: 'Select the specific categories of junk email that you want to block from your inbox. The Postini "Bulk Mail" filter will block most general-purpose spam.' There are five filter categories, each with a checkbox and a description: 'Sexually Explicit' (with a red X icon), 'Get Rich Quick' (with a green dollar sign icon), 'Racially Insensitive' (with a speech bubble icon), 'Special Offers' (with a red gift icon), and 'Bulk Mail' (with a mail icon). The 'Bulk Mail' filter is noted as being automatically blocked. At the bottom, there are 'Save Changes' and 'Cancel' buttons.

### Never a lost email

Suspicious email messages are quarantined in your web-based message center and you are periodically notified when suspicious email are detained.

The screenshot shows the 'Message Center' configuration interface for 'Filter Sensitivity'. It starts with 'Welcome dbest@postnincorp.com' and 'Message Center' navigation. Below are links for 'Configure: Wireless', 'Junk Email', 'Virus', and 'Fax'. The 'Filter Sensitivity' section asks the user to 'Select a level of protection that meets your needs.' It provides a warning: 'If too many legitimate emails are being quarantined, adjust the sensitivity of the setting to a more lenient setting or add specific senders to your approved senders list.' There are three radio button options: 'Lenient' (selected), 'Moderate', and 'Aggressive'. Each option has a brief description of its effect. At the bottom, there are 'Save Changes' and 'Cancel' buttons.

### Most Economical

Junk Email Assistant requires no investment in new software or hardware. You are protected around the clock when you subscribe. No need to update your software, it is done automatically.
